

ANNOUNCEMENTS

1

Anthropic Releases Its First Mythos-Class Model to the Public as Claude Fable 5

Source: [Multiple \(Fortune, Axios, Bloomberg\)](#)

On June 9, 2026, Anthropic released its first Mythos-class model to the general public as Claude Fable 5, which it calls the most capable model it has made generally available, citing gains in coding, knowledge work, and vision....

2

OpenAI Stands Up a Dedicated Robotics Division

Source: [OpenAI \(Sam Altman\)](#), via [The Information](#), [TechCrunch](#), [The Verge](#)

Sam Altman announced that OpenAI is launching a dedicated Robotics Division and is hiring across full-stack hardware, operations, and engineering roles. The move marks OpenAI's formal push beyond software into building physical robots powered by its models.

3

Mount Sinai Releases Health & AI Policy Index (HAPI) Framework

Source: [AI and Human Health at Mount Sinai](#), [npj Digital Medicine](#)

Researchers at Mount Sinai's AI and Human Health center published the Health & AI Policy Index, or HAPI, a structured framework for tracking and analyzing the evolving landscape of AI healthcare policies, appearing in npj Digital Medicine.

4

A Wave of Remote-Code-Execution Flaws Hits Mainstream AI Coding Agents

Source: [Adversal AI](#), [Microsoft Security](#), [Help Net Security](#)

Security researchers disclosed a cluster of serious vulnerabilities in widely used AI coding agents, including SymJack (a symlink-hijack RCE breaking six AI coding agents) and TrustFall (a one-click RCE reaching Claude Code, Cursor, Gemini CLI, and GitHub Copilot)....

5

Cognition Raises \$1 Billion at a \$25 Billion Valuation as Devin ARR Nears \$492 Million

Source: [Cognition](#), via [TechCrunch](#), [The AI Insider](#)

Cognition, maker of the autonomous AI software engineer Devin, raised more than \$1 billion at a \$25 billion pre-money valuation, reporting annualized revenue of about \$492 million with enterprise usage growing roughly 50 percent month over month for...

WHAT IT MEANS

The most capable general-purpose AI model is now commercially available, with measurable gains in the coding and engineering tasks that a lean device-software team uses every day. For...

It is like a carmaker selling its fastest engine to everyone, but quietly throttling it back...

The largest AI labs are no longer content to supply the brains : they want to build the bodies too. For medtech and connected-device builders, more lab attention...

It is like a company that has spent years writing the world's best driving software deciding...

Healthcare AI policy is fragmenting across jurisdictions, and a structured tracking framework provides a map for navigating requirements that differ by state, agency, and use case. For a...

Like a comprehensive map of where every state's environmental rules apply, kept current as they change....

AI coding agents are a new attack surface that can run code on developer machines and inside build systems. For a connected medical device with software that will...

It is like discovering that a popular new power tool can be triggered remotely by a...

The market is pricing AI coding agents as a category, not a feature, and the revenue is now large enough to back the bet. For a lean engineering...

It is like a power-tool maker being valued on the houses its tools will help build,...

WHAT IT MEANS FOR: LUNA DIABETES

ENGINEERING VELOCITY

For Luna's engineering team, Fable 5's coding and vision capabilities are directly applicable to the software stack that controls your closed-loop insulin delivery system : algorithm refinement, mobile-app development, sensor-data processing, and test...

HARDWARE INTEGRATION

For Luna, a lean team building an AI-powered physical medical device, OpenAI's push into robotics signals that the foundational technology layers for AI-driven hardware are maturing fast. As frontier labs invest in real-world...

REGULATORY NAVIGATION

For Luna's regulatory strategy, HAPI is a practical tool for mapping the AI-specific regulatory requirements that will apply to a closed-loop insulin delivery device across jurisdictions. As a pre-FDA-submission team, Luna needs to...

DEVELOPMENT SECURITY

For Luna's lean engineering team, this is a practical security priority. If your developers use AI coding agents : Claude Code, Cursor, Copilot, or similar : to build the device software, the RCE...

CAPITAL POSITIONING

For Luna, a lean team scaling toward commercialization, the Cognition raise validates two things simultaneously. First, as an engineering velocity signal: the tools that let a small team punch above its weight are...

THE WEEK IN ONE LINE

The tools, the regulatory frameworks, and the capital signals are converging around AI-driven devices : the lean team that builds with them, documents for them, and tells the story around them is positioned to lead the pack.
